

teklabel

manufactures a variety of high quality custom labels on both flexo and digital equipment.

What sets us apart is the experience and creativity we bring to solving our clients' most unique labeling challenges. We work with our clients to understand what they need and how each label is to be used. Then, together we select the best materials, constructions and graphics to fulfill the need. Whether it's vibrant, consistent color matches from run to run, multi-ply constructions for extended-content promotions, or materials that withstand extreme usage conditions, we find the best solution for each label need.

Prime Labels

Our prime labels attract the consumer's eye, and imprint a memorable brand image. The high quality printing at Teklabel, and our HD graphics, will make your customers' product stand out.

Wine Labels

We manufacture the highest quality flexo and digital wine labels in the industry. With our digital press and 10-color presses, we print wine labels on a wide variety of wine label stocks with in-line foil-stamp and emboss.

Bio-Medical Labels

The Biomedical industry requires labels to be consistently manufactured under tightly regulated controls and documented manufacturing procedures. At Teklabel, we thrive under these stringent guidelines, engineering the label by our customer's side.

Solar Powered Label Production

To reduce our carbon footprint and control electric costs, Teklabel is installing an array of over 300 solar panels that will generate over 70% of our electric power needs.

Promotional Labels

Promotional labels boost sales, promote new products, and provide consumers with more product information. They are typically used for discounts, rebates, recipes, bogos, co-promos, games, sweepstakes or giveaways.

Multi-Ply & Resealable Labels

The top ply of our multi-ply resealable labels easily peels back to expose interior panels, and then reseal to stay on the product. This unique construction offers the real estate to provide consumers with extended content for multi-language, recipes, promotional information and handling instructions.

HD Graphics

Teklabel utilizes Esko's pre-press and direct-to-plate technology and is proud to be one of Esko's world-wide HD Flexo Certified printers. This technology results in colorful labels with dazzling highlights, stable mid-tones, smooth gradients and solids, and high ink density.

HP Indigo digital printing

Digital printing provides exceptional process print quality on a variety of materials. With its quick set-up and plate-less process, it is ideal for low-volume runs with many SKU's, as well as wine label runs on textured stocks.
